

IDA – IDEA Domain Crosswalk

This graphic is to emphasize the overlap of the five (5) IDEA developmental domains under which a child is determined eligible for the FIT Program, and the eight (8) IDA developmental domains. If a child is displaying a 25% or greater delay in ONE of the IDA domains that correspond to an IDEA domain, they are determined eligible for FIT.

PLEASE NOTE: As you can see, the Coping domain crosses over all domains. Therefore it is NOT an eligibility category for the FIT Program!
